SURFACE TESTING FOR COVID-19

Testing the surfaces in your facility can be your first line of defense against Covid-19. When a person infected with Covid-19 coughs, laughs or talks, they can release tiny droplets that fall onto nearby surfaces or surfaces they touch. Depending on the surface, the virus can live and infect others from a few hours to even several days.

Extremely Accurate

Purity Laboratories (Purity) offers an extremely accurate laboratory test to detect Covid-19 on most solid surfaces. This test utilizes RT PCR assay to target the N1 and N2 regions of the nucleocapsid gene of SARS-CoV-2. The limit of detection for Purity's specialized assay for Covid-19 is 5-10 genomic copies (1000-2000 genomic copies of sample per mL). Knowing where there's live Covid-19 on your premises can help direct or influence what measures you take to safeguard the occupants of your facility.

Simple to Use

Purity's Surface Testing Kit comes with everything you need to perform a simple swab test on the surfaces you choose. Purity's surface tests were especially designed to be used with a completely safe buffering solution that neutralizes the virus while preserving the virus's RNA used to confirm the presence of Covid-19.

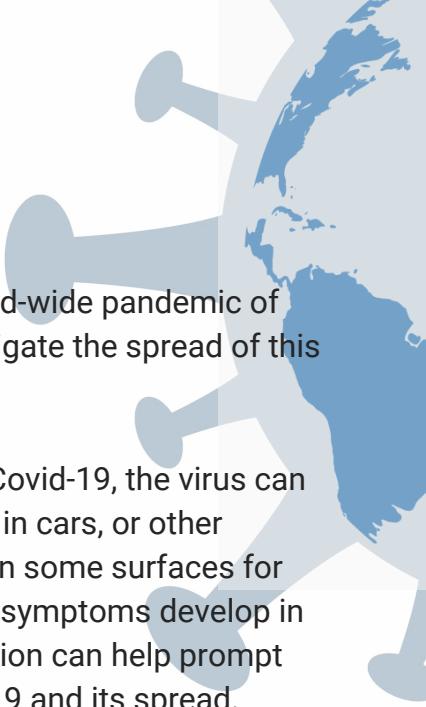

Versatile

Purity's Surface Testing Kits can be used in any facility from small offices to large facilities such as schools and government buildings. Applications can include surfaces in offices, schools, manufacturing plants, food processing plants, restaurants, theaters, hotels, cars and car rentals, hotels, nursing homes, hospitals, homes and more.

What We Can Do

Purity Laboratories (Purity) is responding to the world-wide pandemic of Covid-19 with a range of laboratory tests to help mitigate the spread of this destructive coronavirus.

While testing people is the main focus of detecting Covid-19, the virus can also be detected on surfaces of businesses, homes, in cars, or other environments. Covid-19 can live and be infectious on some surfaces for days or weeks but detection is possible even before symptoms develop in humans who have contracted the virus. Early detection can help prompt appropriate activities to reduce the risk from Covid-19 and its spread.

Purity's Surface Test for Covid-19

Greater Accuracy

Purity's Surface Test for Covid-19 can detect as little as 5-10 genomic copies with its powerful, specialized RT PCR assay that utilizes specially designed PCR equipment for very accurate Covid detection.

Specially Designed

Purity uses a specially designed one-piece testing apparatus that's easy to use. The testing swab is shipped to you on the same vial that holds the buffering solution, which eliminates the use of separate bottles and shipping bottles and swabs separately.

Evidence-Based Guidance

Few employers can afford to test every employee for Covid-19. Testing surfaces can reveal the presence of Covid-19 in your workforce, even before symptoms develop, and help identify specifically affected surface areas that should be specially disinfected. Test results will provide evidence-based guidance to establish and maintain risk reduction protocols.

What's In Your Kit?

YOUR KIT CONTAINS

Instruction

1x Swabs in
buffer vials

1x Pair of
Gloves

Parafilm
Tape

ALCOHOL

1 Package
Wipes

Chain of
Custody
Form

Return
Envelope

Special Pricing

1 TEST

\$100
Each

4 TEST KIT

\$85
Each

8 TEST KIT

\$80
Each

12 TEST KIT

\$75
Each
